LPG explained

LPG's role in the energy transition

What is LPG

LPG consists primarily of propane and butane, and is a by-product of oil refining and natural gas production

Source of LPG produced

Global LPG production
mtpa

Clean

One of the cleanest conventional fuels available

Non-toxic and has no impact on soil, water and underground aquifers

Reduces CO₂ emissions substantially

Clean burning, reducing deaths from indoor air pollution

Low-carbon footprint

Efficient

Portable fuel providing reliable access to energy

Flexible supply chain with limited infrastructure

Easily and cost effectively stored and transported

LPG produces more energy per unit than other fossil fuels

Versatile

Suitable for a wide range of applications, across commercial, retail to industrial segments

Cooking and heating accounts for ~45% of the global demand for LPG

Available in sufficient quantities
